Partner with Accelerator IT

Experts in shopping centre connectivity

Make fast, safe, secure technology a unique selling point for your clients and their customers.

With the growing trend of event shopping, taking a visit to a shopping centre and making a purchase needs to be as slick as ordering online.

Visitors want fast, mobile phone coverage and internet for easy check-ins. They want to order food on self-service kiosks and take up in-store promotions on phones with QR Codes.

For the companies renting the retail or business premises in the shopping centre. They want safe, secure internet services to enable card payments to be taken. They need reliable CCTV to watch their store and robust IT to run a real-time stock system to manage the business.

Shopping Centre Evolution

Shopping centres are evolving into hybrid environments, where digital convenience meets physical engagement. Here's a breakdown of what makes the modern shopping experience seamless and appealing:

Fast Connectivity
Reliable Wi-Fi and mobile coverage are essential for browsing, sharing, and engaging with digital content while shopping.

Effortless Entry & Navigation
Digital check-ins, app-based maps, and smart parking systems reduce friction from arrival to checkout.

Self-Service & Speed
Kiosks for food ordering, mobile payments, and scan-and-go options streamline the experience.

Mobile-Driven Promotions
QR codes, app notifications, and location-based offers make promotions timely and relevant.

Companion Comfort
Seating areas with charging stations and entertainment zones cater to non-shoppers who are waiting.

Accelerator Ltd supply and support robust IT structures needed for fast, secure, shopping centre connectivity.
